

Device Security Maturity Model

	<u>Level 1: Initial</u>	<u>Level 2: Repeatable</u>	<u>Level 3: Defined</u>	<u>Level 4: Managed</u>	<u>Level 5: Optimizing</u>
Culture	<p>Vision: Uncommunicated Device & Security Vision</p> <p>Device Risk Identification: Little to none</p> <p>Communication: Restricted</p> <p>Innovation: Sub-Innovating</p>	<p>Vision: Clear Device & Security Requirements</p> <p>Device Risk Identification: Immature Processes</p> <p>Communication: Rapid Intra-Team</p> <p>Innovation: by Necessity</p>	<p>Vision: Articulated Device & Security Business Goals</p> <p>Device Risk Identification: Process Defined & Known</p> <p>Communication: Rapid Inter-Team</p> <p>Innovation: by Design</p>	<p>Vision: Articulated Device and Security Business Vision</p> <p>Device Risk Identification: Clear & Proactive. Periodic Monitoring</p> <p>Communication: Frequent, Collaborative</p> <p>Innovation: Strategic</p>	<p>Vision: Articulated Device & Security Business Strategy</p> <p>Device Risk Identification: Continuous Monitoring</p> <p>Communication: Rapid Feedback</p> <p>Innovation: Ownership Mindset</p>
Process	<p>Incident Recovery: Reactive or Non-existent Processes</p> <p>Management: Inconsistent and Project</p> <p>Product Rollout: Ad Hoc for Development and Testing</p> <p>Reporting: Ad Hoc & Inconsistent</p>	<p>Incident Recovery: Resiliency and Recovery Capabilities Applied Consistently</p> <p>Management: Project & Requirements Based</p> <p>Product Rollout: Scheduled Testing and Deliveries</p> <p>Reporting: Tactical</p>	<p>Incident Recovery: BC/DR Plan Defines Steps to Continue Critical Function and Recover to Normal</p> <p>Management: Integrated Projects</p> <p>Product Rollout: Automated Deliveries and Testing</p> <p>Reporting: Consolidated</p>	<p>Incident Recovery: Complex Orchestrations</p> <p>Management: Quantitative Projects</p> <p>Product Rollout: Frequent Deliveries and Qualitative Testing</p> <p>Reporting: Strategic</p>	<p>Incident Recovery: Distributed Orchestrations</p> <p>Management: Organized and Performance Based</p> <p>Product Rollout: Continuous Deliveries and Testing</p> <p>Reporting: Predictive</p>
People	<p>Incident Response Training: Reactive or Non-existent process</p> <p>Security Updates: Forced on Constituents</p> <p>Organization: Ticket-centric, Skills-based Teams with Tribal Knowledge</p>	<p>Incident Response Training: Consistent Roles for Working</p> <p>Security Updates: Deadline Based</p> <p>Organization: Deliveries-based, In-Level Security Skills with Written Knowledge</p>	<p>Incident Response Training: Plan for Incident Preparation, Analysis, Containment, Eradication Orchestration Exists</p> <p>Security Updates: Collaboration based</p> <p>Organization: Projects-based with In-Level Skills, Automation</p>	<p>Incident Response Training: Response Times and Impacts Monitored and Minimized</p> <p>Security Updates: Community Based and Led</p> <p>Organization: Products-centric, In-Level Skills and Knowledge</p>	<p>Incident Response Training: Proactive, Regular Testing and Updating of Personnel, Procedures, and Tech</p> <p>Security Updates: Community Organized and Recommended</p> <p>Organization: KPI-goaled, Interdisciplinary Teams, Continuous Education</p>
Technology	<p>Device Protection: Minimal and Ad Hoc</p> <p>Monitoring / Alerting: Minimal with No Automation</p> <p>Anomaly Detection: Minimal or Non-existent</p>	<p>Device Protection: Reactive and Ad Hoc</p> <p>Monitoring / Alerting: Core level - Build Automation</p> <p>Anomaly Detection: Functional Tooling</p>	<p>Device Protection: Formally Protected by Classifications</p> <p>Monitoring / Alerting: Integrated and Actionable</p> <p>Anomaly Detection: Continuous</p>	<p>Device Protection: All Environments Proactively Monitored via Protective Technologies</p> <p>Monitoring / Alerting: Self-healing</p> <p>Anomaly Detection: Continuous, Real-time Automation</p>	<p>Device Protection: Standards Operationalized and Automated Using Advanced Technologies</p> <p>Monitoring / Alerting: Self-learning, Self-managing</p> <p>Anomaly Detection: Automation Against Baselined Behavior</p>
Standards	<p>Architecture: Ad Hoc</p> <p>Standards: None in Place</p> <p>Compliance: Non Existent</p> <p>Audit: Third-party Imposed</p>	<p>Architecture: Stack Based</p> <p>Standards: Ad Hoc</p> <p>Compliance: Reactive Adherence</p> <p>Audit: Ad Hoc</p>	<p>Architecture: ZTNA and SASE Aspirations</p> <p>Standards: Reactive Adherence</p> <p>Compliance: Requirements Met</p> <p>Audit: Reactive Adherence</p>	<p>Architecture: ZTNA and SASE Vision in Progress</p> <p>Standards: NIST / CIS Aspirations</p> <p>Compliance: Requirements Baselined</p> <p>Audit: Frequent, Collaborative</p>	<p>Architecture: ZTNA and SASE Baselined and Measured</p> <p>Standards: NIST / CIS Baselined</p> <p>Compliance: Continuous Measurement and Testing</p> <p>Audit: Continuous and Organized</p>
